

## CleanRiverSolutions

The ZIM innovation network CleanRiverSolutions, established at the Experimentelle Fabrik Magdeburg in May 2019, is dedicated to the ecological enhancement of flowing, inland and marine waters. With a broad network of industrial partners and research institutions, both active and passive systems and processes for watercourse purification are developed, manufactured and tested. Solutions and strategies for all phases of a pollution cycle are considered for very different fields of application. For the sustainable implementation of the systems, the most holistic service offers possible are created, which, in addition to the ecological components, also comprehensively take into account the economic components.

## CleanRiverSolutions

The research areas of the ZIM innovation network focus on:

- System solutions for the purification of river flows
- Solutions for cleaning and filtering micro- and nanoplastics
- Solutions for water owners and users
- Solutions for watercourse remediation
- Development of applications for drone technologies

The partners of the ZIM Innovation Network are open to further collaborations and look forward to sharing innovative ideas to reduce and prevent pollution in water bodies. The employees of the network management from the Experimental Factory Magdeburg are available as contact persons for this purpose.
